Evaluation & Testing

Scope | ten companies, one snapshot: the 21 filings Data, GraphRAG and Eval now share

Each team's filing list against Data's database (Nov 3)

List	Filings	Match
Data database (Nov 3)	21 (10 10-K, 11 10-Q)	the reference
Data inventory 2021-2026	233	contains all 21; 1 newer: Microsoft 10-Q to 09/2026
GraphRAG extraction	20 of 21	NetApp 10-Q held back (review required)
Eval Gold Set v2	21 of 21	was 20/21 on 10/29 (Micron 10-K)
RAG v2 index	2 of 10 companies	Apple, Microsoft; 8 to index for round 1

FY2026 Micron's 10-K (filed Oct 9) is in the database. We said on 10/29 it was not: the SEC data API still lacks it, so we now read it from the filing

3 NetApp 10-Qs tagged one fiscal year behind the filing's own text (fiscal 2027 tagged 2026)

233 filings for 2021-2026 in Data's inventory; 232 pass Data's fact checks, 1 is in review

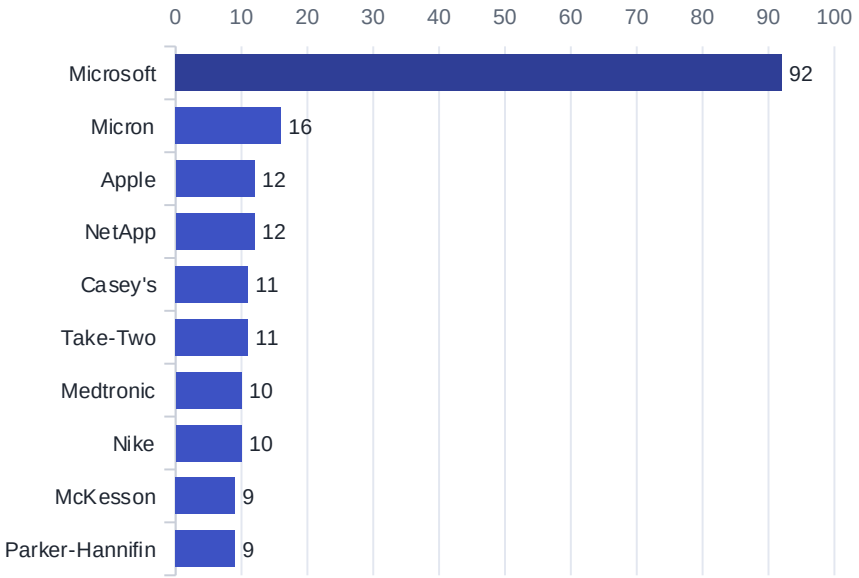

Proposal: freeze this 21-filing snapshot for round 1, as RAG also asked Data. Every question names its period, so filings loaded later cannot silently change an answer.

Evaluation & Testing

Gold Set v2 | 155 questions, all on the ten companies; every answer checked against SEC data

Answerable questions per company (Microsoft stays the MVP)

55/55 independent re-reads of new answers agree (SEC API, and Micron's 10-K itself)

160/160 grader labels right on the 40 new numeric questions (right, restated, x1000, sign)

9/9 other companies' latest income statements, read from the filings: every figure matches the gold

$337M minority interests inside McKesson's printed 'Net income' (5,099 vs 4,762); questions now say which figure

9 new Exhibit 21 relationship and NetApp fiscal-label questions (next slide)

Changed since 10/29: Micron moves to fiscal 2026 (revenue USD 133,188M, up 256% in a 53-week year); last week's Micron refusal question became a derived fourth-quarter question.

Evaluation & Testing

Relationships | Exhibit 21 brings GraphRAG-style questions to the ten companies

Question (short)	Expected answer	Tests
Countries in both Apple's and Micron's subsidiary lists?	China, India, Japan, Singapore	join across companies
Insurance subsidiaries of Apple, Casey's, Micron?	Arizona, Iowa, Hawaii	three-company traversal
Micron: subsidiaries listed, how many abroad?	21; 15 outside the U.S.	count a list
Is Braeburn Capital a Micron subsidiary?	No: it is Apple's	invented link
Which Micron business owns Spotinst?	False premise: NetApp's	invented link
NetApp quarter ended Jul 31, 2026: fiscal label?	Fiscal 2027 Q1 (metadata says 2026)	metadata trap

11 questions routed to GraphRAG: 4 drafted with GraphRAG + 7 from Exhibit 21

3 Exhibit 21 lists transcribed in full and read twice (Apple 19, Casey's 9, Micron 21)

4 invented-relationship checks in total, the way graphs most often fail

144 Take-Two subsidiaries: too long to transcribe reliably, so long lists are used only for lookups

For GraphRAG: these cover the M02 and M14 shapes from your eval-ask, now on the ten companies. Once Data's cleaned Exhibit 21 lands, we compare it with our reads.

Evaluation & Testing

Answer, clarify, abstain or block | draft rules for the Agents' checkpoints, with a test set and a score

Decision	When	Tools
Answer	Company and period known; evidence supports every number	as routed
Clarify	Company missing, or 'it'/'they' with nothing to refer to	0
Abstain	Outside the ten or the snapshot; forecast; advice; not disclosed	0 if the gate decides
Block	Off-topic or instruction override: ask for an on-topic question	0

179 questions: Gold Set v2 + 24 new clarify/abstain/off-topic

	Answer everything	Simple scope check
Right decision	79.9%	**96.1%**
Unsafe answers	100%	**13.9%**
Tool calls on off-topic	8	**0**
Needless refusals	0%	0%

The 5 unsafe answers left need an evidence check after retrieval: figures the filing does not disclose, invented relationships, a quarter not yet filed.

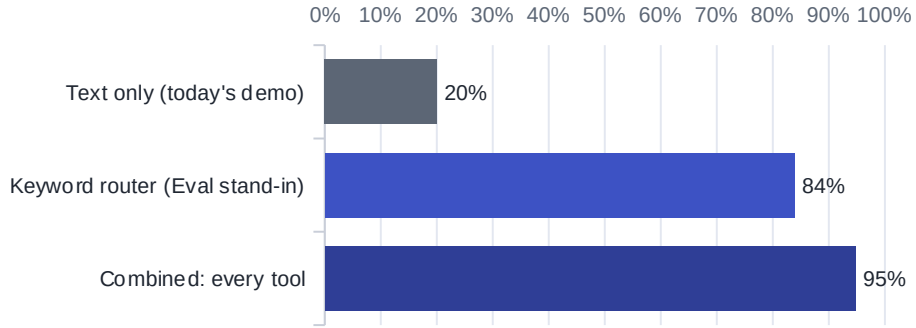

From KPMG's 10/29 guidance: checkpoints gate off-topic questions and block tool calls. The scope check is a reference point; Agents own the real rules.

Evaluation & Testing

Routing | question-based routing vs combined retrieval, on the same 155 questions

Questions whose needed tools were called

Router	Tool calls / question	Unneeded calls / question
Text only (today's demo)	1.00	0.79
Keyword router (Eval stand-in)	1.05	0.25
Combined: every tool	3.00	2.05

Expected route on every question

104 finance data · 31 text · 11 graph · 1 both · 8 no tool

48% keyword router on text questions: narrative questions that mention numbers get sent to the finance data

RAG's two asks: done

Accuracy by route: every scorecard now reports numeric accuracy by expected route.
Fixed reader: gpt-4o-mini at temperature 0, RAG's own prompt, top 8, is a harness system; it runs once an API key is set.

Trade-off: combined retrieval covers 95% at 3 calls per question; a router covers 84% at 1.05. Agents can run their orchestrator through the same script.

Source: Week 7/results/routing_baselines.json; kpmg_eval/metrics/routing.py; scripts/systems.py (FixedReaderSystem). Expected routes are Eval's labels, for Agents to review

Evaluation & Testing

Next steps | anchor fixes for RAG, and one ask per team before round 1 (W8)

Our review of RAG's 100 anchors

97/99 numbers the answers use sit in an anchored chunk

17/25 broad anchors get a specific replacement, e.g. 'Total revenue | 82,886' (6 chunks to 1)

2 anchors to remove: a share-count string carried over from Gold v0

10 questions to drop, incl. the 8 Amazon/Meta ones RAG asked about: outside the ten

Team	Ask before round 1
Data	Confirm the 21-filing snapshot as the round-1 freeze; share chunks for all 21; cleaned Exhibit 21 to compare with our reads
RAG	Index the other 8 companies; apply rag_anchor_fixes.csv; an API key for the fixed reader
GraphRAG	Hops for the 165 questions; review the 11 relationship questions; a backend date
Agents	Review the decision rules and expected routes; add 'decision' to the AnswerBlock
Eval	Text anchors for the new questions once chunks land; run round 1 in week 8

Round 1 needs three things: the frozen snapshot, an index for all ten companies, and the Agent's AnswerBlock. The grading side is ready.
